Education

M.S. in Computer Science Candidate - May 2026
Southern Adventist University, Collegedale TN
B.S. in Computer Science May 2025
Southern Adventist University | Link to all courses
Relevant Courses: Operating Systems, Operational Programming Languages, Advanced Software Engineering, Data Structures and Algorithms, Web Services, Advanced Web Programming, Artificial Intelligence

Experience

Full Stack Developer July 2024 - Present
Kaizan Enterprises, LLC *TypeScript, NestJS, React, Vertabelo, MySQL Workbench, Insomnia, Figma, Docker, Git*

I have designed, implemented, and deployed MySQL databases, RESTful APIs, and an intuitive UI/UX for a scalable application. Optimized for key performance benchmarks such as low latency and fast page load times while effectively communicating technical concepts and project progress to clients

- Designed and developed a database using Vertabelo, MySQL Workbench, and MikroORM for seamless integration with the application backend
- Deployed the application on AWS using EC2 instances for hosting Nest and NextJS services, RDS for the MYSQL database, and Cognito for user authentication and registration
- Authored a comprehensive Requirement Document, Code Rules, and Policy Guidelines to improve code consistency and establish clear development standards across the project
- Wrote 67 RESTful API endpoints in a NestJS backend
- Designed a responsive and intuitive NextJS frontend using tanstack for state management

Backend Developer Intern May 2023 - April 2024
Symvara *Typescript, NestJS, Git, GitHub, MySQL, Jira*

I implemented a comprehensive suite of solutions, including automated schema updates, modular APIs, and automated unit and end-to-end testing procedures. These measures were crucial for minimizing database management overhead, ensuring code quality, and facilitating future development efforts. I maintained communication with the team manager through regular progress checks and contributed to team meetings focused on task coordination and planning.

- Designed and developed a backend application using NestJS with MikroORM, MySQL, and a Git workflow
- Implemented automatic schema updates using MikroORM for seamless database management
- Built 4 separate API modules with respective DTOs and entities, ensuring efficient code organization and simple feature integration
- Created 4 automated testing suites with 200+ individual tests using Jest, reducing the risk of production errors and preventing regression errors
- Wrote documentation outlining automated testing procedures and modified existing database documentation, helping with knowledge transfer and onboarding new team members

Projects

SAURagflow (AI tool) Mar 2025 - May 2025
An LLM interface for exploring university history through letters *Flask, React, Python, JavaScript, Git, Docker, Jira*

Collaborated with a partner, as a Scrum master, to design and create a Flask backend that acted as middleware between the frontend and Llama 3.

Organization of Programming Languages Jan 2024 - May 2024
Implemented a Parser and Interpreter for the Lox programming lanaguage

Created a parser and interpreter without using generation tools using C.

Skills

Languages:
C++, TypeScript, JavaScript, Python, Java, C#, C

Technologies & Tools:
AWS EC2, AWS RDS, AWS Cognito, React, NextJS, NestJS, NodeJS, Git, Docker, Jest

Developer Tools:
Visual Studio, Visual Studio Code, Docker, Git, Swagger, MySQL Workbench
